UI/UX Screen Concepts

A unified customer support ticketing system for Customers, Support Agents, and Administrators.

Design direction

Clean blue-and-white interface, shared application shell, readable status indicators, responsive layouts, and role-specific navigation.

Core workflow

- Customers register, create tickets, track status, and exchange replies.
- Agents triage queues, reply, add private notes, update ticket fields, and record resolutions.
- Administrators oversee tickets, manage accounts and roles, review reports, and maintain categories.

Prototype note: these are illustrative screen concepts with sample data, not screenshots of a running application. Backend behavior, authorization, and live analytics must be implemented and tested separately.
